User Interface (UI) and User Experience (UX) Design

User interface is the front-end application view to which user interacts in order to use the software. User can manipulate and control the software as well as hardware by means of user interface. Today, user interface is found at almost every place where digital technology exists, right from computers, mobile phones, cars, medical players.

User Interface (UI) and User Experience (UX) Design

The course teaches User Interface Design (UI) and User Experience (UX) as a strategic area of development for new media. Concept development, critical evaluation, refinement, and execution. Have your critical thinking strategies for effective graphic design by practicing what you learn in relation to print- and web-based communication.
