Positioning the Academic Library within the University - Les Appleton - 2001-05-14

“Positioning the Academic Library within the University” is an accessible, informative and timely resource for academic librarians and others interested in the academic library’s role in contemporary higher education. The book is a key guide to thinking and doing in the present and shaping the future of libraries.

Positioning the Academic Library within the University: Lessons from the Field - Les Appleton - 2001-05-14

“Positioning the Academic Library within the University” is an accessible, informative and timely resource for academic librarians and others interested in the academic library’s role in contemporary higher education. The book is a key guide to thinking and doing in the present and shaping the future of libraries.

Academic Libraries are facing uncertain times. The international higher education environment is very volatile and academic libraries and librarians can play a major role in helping to strategically position their parent institution within it. In doing so, there needs to be clarity as to what the position of the academic library is with respect to the university and its mission. There are several ways in which the academic library can position itself and this collection demonstrates many of these. Strategic alignment with the university and its mission is a fundamental part of successful positioning, as is being flexible, adaptable and responsive to changing needs, requirements and expectations. Developments in research support and library services, library leadership, library technology and library funding are discussed.
other emerging themes, such as library functions and institutional partnerships and collaborations, are all discussed in the book and provide the reader with a rich variety of reflections and case studies on how academic libraries, from across the globe, have addressed their position within their institution. This book was originally published as a special issue of the journal New Review of Academic Librarianship.

**Information Needs Analysis** - Daniel G. Dorner - 2014-12-31

If you want to provide an information service that truly fulfils your users' needs, this book is essential reading. Analysing and assessing the information needs of clients is key to the provision of effective service and appropriate collections in both face-to-face and virtual library services. The importance of information needs analysis is widely recognized by information professionals, but currently there is little substantive, detailed work in the professional literature devoted to this important topic. This new book is designed to fill that gap, by supporting practitioners in developing an information needs analysis strategy, and offering the necessary professional skills and techniques to do so. It will offer guidance to team leaders and senior managers in all areas of library work, especially those involved in collection management, service provision and web development, and is equally applicable to the needs of academic, public, government, commercial and other more specialized library and information services. The text adopts a hands-on, jargon-free approach, and includes relevant examples, case studies, reader activities and sources of further reading. Key areas covered include: - what is information needs analysis? - how is needs analysis conducted? - what are the varieties of needs analysis? - how are analyses evaluated and reported? Readership: The book will be essential reading for library and information practitioners, team leaders and senior managers. It will also be a core text on course reading lists in departments of library and information studies.

**Foundations of Library and Information Science** - Richard E. Rubin - 2020-09-14

In its newest edition, Foundations of Library and Information Science remains the field's essential resource.
